SNOOKER

Special Application

Snooker is a **custom** linear LED lighting solution developed for areas where light must be precisely directed to defined task zones. Designed for **snooker** and billiard tables, it provides controlled illumination without disturbing players or the surrounding environment.

The optical system focuses light onto the playing surface, ensuring uniform brightness while minimizing glare and unwanted spill. This supports accurate play, clear ball visibility and consistent lighting across the entire table.

As a custom adaptation of the Endless system, Snooker offers project-specific configuration in length, light output and mounting, making it suitable for professional clubs, sports facilities and entertainment venues requiring precision lighting.

Options and Extras:

- Custom optical configuration for targeted illumination
- Project-specific light distribution to avoid glare and light spill
- Custom length and output based on table dimensions
- All lighting parameters are defined on a project basis to ensure optimal visual conditions for each installation.
- Tunable White
